Federal Communications Commission Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

• This device may not cause harmful interference, and
• This device must accept any interference received including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with manufacturer's instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

Canadian Department of Communications Statement

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

This class B digital apparatus complies with Canadian ICES-003.

REACH

Complying with the REACH (Registration, Evaluation, Authorization, and Restriction of Chemicals) regulatory framework, we publish the chemical substances in our products at ASUS REACH website at http://csr.asus.com/english/REACH.htm.
Safety information

Electrical safety

- To prevent electrical shock hazard, disconnect the power cable from the electrical outlet before relocating the system.
- When adding or removing devices to or from the system, ensure that the power cables for the devices are unplugged before the signal cables are connected. If possible, disconnect all power cables from the existing system before you add a device.
- Before connecting or removing signal cables from the motherboard, ensure that all power cables are unplugged.
- Seek professional assistance before using an adapter or extension cord. These devices could interrupt the grounding circuit.
- Make sure that your power supply is set to the correct voltage in your area. If you are not sure about the voltage of the electrical outlet you are using, contact your local power company.
- If the power supply is broken, do not try to fix it by yourself. Contact a qualified service technician or your retailer.

Operation safety

- Before installing the motherboard and adding devices on it, carefully read all the manuals that came with the package.
- Before using the product, make sure all cables are correctly connected and the power cables are not damaged. If you detect any damage, contact your dealer immediately.
- To avoid short circuits, keep paper clips, screws, and staples away from connectors, slots, sockets and circuitry.
- Avoid dust, humidity, and temperature extremes. Do not place the product in any area where it may become wet.
- Place the product on a stable surface.
- If you encounter technical problems with the product, contact a qualified service technician or your retailer.

DO NOT throw the motherboard in municipal waste. This product has been designed to enable proper reuse of parts and recycling. This symbol of the crossed out wheeled bin indicates that the product (electrical and electronic equipment) should not be placed in municipal waste. Check local regulations for disposal of electronic products.

DO NOT throw the mercury-containing button cell battery in municipal waste. This symbol of the crossed out wheeled bin indicates that the battery should not be placed in municipal waste.
About this guide

This user guide contains the information you need when installing and configuring the motherboard.

How this guide is organized

This user guide contains the following parts:

- **Chapter 1: Product introduction**
  This chapter describes the features of the motherboard and the new technologies it supports.

- **Chapter 2: Hardware information**
  This chapter lists the hardware setup procedures that you have to perform when installing system components. It includes description of the switches, jumpers, and connectors on the motherboard.

- **Chapter 3: Powering up**
  This chapter describes the power up sequence and ways of shutting down the system.

- **Chapter 4: BIOS setup**
  This chapter tells how to change system settings through the BIOS Setup menus. Detailed descriptions of the BIOS parameters are also provided.

- **Chapter 5: RAID configuration**
  This chapter provides instructions for setting up, creating, and configuring RAID sets using the available utilities.

- **Chapter 6: Driver installation**
  This chapter provides instructions for installing the necessary drivers for different system components.

Where to find more information

Refer to the following sources for additional information and for product and software updates.

1. **ASUS websites**
   The ASUS website provides updated information on ASUS hardware and software products. Refer to the ASUS contact information.

2. **Optional documentation**
   Your product package may include optional documentation, such as warranty flyers, that may have been added by your dealer. These documents are not part of the standard package.
Conventions used in this guide

To make sure that you perform certain tasks properly, take note of the following symbols used throughout this manual.

**DANGER/WARNING:** Information to prevent injury to yourself when trying to complete a task.

**CAUTION:** Information to prevent damage to the components when trying to complete a task.

**IMPORTANT:** Instructions that you MUST follow to complete a task.

**NOTE:** Tips and additional information to help you complete a task.

**Typography**

**Bold text**
Indicates a menu or an item to select.

**Italics**
Used to emphasize a word or a phrase.

**<Key>**
Keys enclosed in the less-than and greater-than sign means that you must press the enclosed key.

Example: `<Enter>` means that you must press the Enter or Return key.

**<Key1+Key2+Key3>**
If you must press two or more keys simultaneously, the key names are linked with a plus sign (+).

Example: `<Ctrl+Alt+Del>`

**Command**
Means that you must type the command exactly as shown, then supply the required item or value enclosed in brackets.

Example: At the DOS prompt, type the command line: `format A:/S`

---

DO NOT touch the Northbridge chipset! The Northbridge chipset may become overheated. Remember to provide sufficient air flow to keep the system stable.
This chapter describes the motherboard features and the new technologies it supports.

Product introduction
1.1 Welcome! ...................................................................................... 1-3
1.2 Package contents........................................................................... 1-3
1.3 Serial number label...................................................................... 1-4
1.4 Special features............................................................................ 1-4
1.1 Welcome!

Thank you for buying an ASUS® KGPE-D16 motherboard!

The motherboard delivers a host of new features and latest technologies, making it another standout in the long line of ASUS quality motherboards!

Before you start installing the motherboard, and hardware devices on it, check the items in your package with the list below.

1.2 Package contents

Check your motherboard package for the following items.

<table>

</table>
1.3 Serial number label

Before requesting support from the ASUS Technical Support team, you must take note of the motherboard's serial number containing 12 characters xxS2xxxxxxxx shown as the figure below. With the correct serial number of the product, ASUS Technical Support team members can then offer a quicker and satisfying solution to your problems.

1.4 Special features

1.4.1 Product highlights

Latest processor technology

This motherboard supports the latest AMD® Opteron™ 6100 series processors in LGA 1944 package with integrated memory controller to support 4-channel (8 DIMM per CPU) DDR3 memory. AMD® Opteron™ 6100 series processor supports AMD® HyperTransport™ technology with a system bus of up to 6.4GT/s per link. AMD® Opteron™ 6100 series processor is one of the most powerful and energy-efficient CPUs in the world.

AMD 8/12 Core Architecture

The motherboard supports AMD 8/12 core processors with discrete L2 cache structure for each core and shared L3 cache to meet demands for more powerful computing.

HyperTransport™ technology 3.0 (HT3)

HyperTransport™ technology 3.0 (HT3) is a high-speed, low latency, point-to-point link designed to improve the overall system balance and scalability with the maximum interconnect rate of 6.4GT/s.
**DDR3 memory support**

The KGPE-D16 supports UDIMM and RDIMM DDR3 memory that features data transfer rates of 1333/1066/800 MHZ to meet the higher bandwidth requirements of server and workstation applications. The 4-channel DDR3 architecture boosts system performance, eliminating bottlenecks with peak bandwidth of up to 42.7GB/s. Furthermore, the supply voltage for the memory is reduced from 1.8 V for DDR2 to just 1.5V for DDR3. This voltage reduction limits the power consumption and heat generation of DDR3 which makes it an ideal memory solution.

**PCI Express™ interface**

The motherboard fully supports PCI Express, the latest I/O interconnect technology that speeds up the PCI bus. PCI Express features point-to-point serial interconnections between devices and allows higher clockspeeds by carrying data in packets. This high speed interface is software compatible with existing PCI specifications.

**82574L LAN Solution**

The motherboard comes with dual Gigabit LAN controllers and ports which provide a total solution for your networking needs. The onboard Intel 82574L Gigabit LAN controllers use the PCI Express interface and could achieve network throughput close to Gigabit bandwidth.

**Serial ATA II technology**

The motherboard supports the Serial ATA II 3 Gb/s technology through the Serial ATA interface and Intel ICH10R chipset. The Serial ATA II specification provides twice the bandwidth of the current Serial ATA products with a host of new features, including Native Command Queuing (NCQ), Power Management (PM) Implementation Algorithm, and Hot Swap. Serial ATA allows thinner, more flexible cables with lower pin count and reduced voltage requirements.

**USB 2.0 technology**

The motherboard implements the Universal Serial Bus (USB) 2.0 specification, dramatically increasing the connection speed from the 12 Mbps bandwidth on USB 1.1 to a fast 480 Mbps on USB 2.0. USB 2.0 is backward compatible with USB 1.1.

**Temperature, fan, and voltage monitoring**

The CPU temperature is monitored to prevent overheating and damage. The system fan rotations per minute (RPM) is monitored for timely failure detection. The chip monitors the voltage levels to ensure stable supply of current for critical components.
1.4.2 Innovative ASUS features

ASUS Fan Speed technology
The ASUS Fan Speed technology smartly adjusts the fan speeds according to the system loading to ensure quiet, cool, and efficient operation.

PIKE (Proprietary I/O Kit Expansion)
PIKE is an on-demand upgrade kit for users. This ASUS unique feature enables users to choose their preferred I/O solutions. ASUS provides multiple SAS solutions for different segments and purposes and PIKE saves lots of validation efforts and hardware cost for end users. Moreover, the special patent design offers multiple I/O solutions without occupying the Slot 6 in 1U system.

ASUS MIO Audio card
Enjoy high-end sound quality! The ASUS MIO audio card is a discrete 8-channel high definition audio (High Definition Audio previously codenamed Azalia) CODEC enable clearest high quality audio output, jack-sensing feature, retasking functions, and multi-streaming technology that simultaneously send different audio streams to different destinations.
Chapter 2: Hardware information

This chapter lists the hardware setup procedures that you have to perform when installing system components. It includes description of the jumpers and connectors on the motherboard.
2

Chapter summary

2.1 Before you proceed ................................................................. 2-3
2.2 Motherboard overview ........................................................... 2-6
2.3 Central Processing Unit (CPU) ............................................... 2-10
2.4 System memory ................................................................. 2-16
2.5 Expansion slots ................................................................. 2-20
2.6 Jumpers ................................................................. 2-26
2.7 Connectors ................................................................. 2-31
2.1 Before you proceed

Take note of the following precautions before you install motherboard components or change any motherboard settings.

- Unplug the power cord from the wall socket before touching any component.
- Use a grounded wrist strap or touch a safely grounded object or a metal object, such as the power supply case, before handling components to avoid damaging them due to static electricity.
- Hold components by the edges to avoid touching the ICs on them.
- Whenever you uninstall any component, place it on a grounded antistatic pad or in the bag that came with the component.
- Before you install or remove any component, ensure that the power supply is switched off or the power cord is detached from the power supply. Failure to do so may cause severe damage to the motherboard, peripherals, and/or components.

Onboard LED

1. Standby Power LED

The motherboard comes with a standby power LED. The green LED lights up to indicate that the system is ON, in sleep mode, or in soft-off mode. This is a reminder that you should shut down the system and unplug the power cable before removing or plugging in any motherboard component. The illustration below shows the location of the onboard LED
2. **CPU warning LED (ERR_CPU1, ERR_CPU2)**
   The CPU warning LEDs light up to indicate that an impending failure of the corresponding CPU.

![](KGPE-D16_ERR_CPU_LED.png)

3. **DIMM warning LED (ERR_DIMMA1/2; ERR_DIMMB1/2; ERR_DIMMC1/2; ERR_DIMMD1/2; ERR_DIMME1/2; ERR_DIMMF1/2; ERR_DIMMG1/2; ERR_DIMMH1/2)**
   The DIMM warning LEDs light up to indicate that an impending failure of the corresponding DIMMs.

![](KGPE-D16_ERR_DIMM_LED.png)
4. **BMC LED (BMC_LED1)**

The green heartbeat LED blinks per second to indicate that the ASMB4 is working normally.

---

The heartbeat LED functions only when you install the ASUS ASMB4.
2.2 Motherboard overview

Before you install the motherboard, study the configuration of your chassis to ensure that the motherboard fits into it.

To optimize the motherboard features, we highly recommend that you install it in an SSI EEB 1.1 compliant chassis.

Ensure to unplug the chassis power cord before installing or removing the motherboard. Failure to do so can cause you physical injury and damage motherboard components!

2.2.1 Placement direction

When installing the motherboard, ensure that you place it into the chassis in the correct orientation. The edge with external ports goes to the rear part of the chassis as indicated in the image below.

2.2.2 Screw holes

Place nine (9) screws into the holes indicated by circles to secure the motherboard to the chassis.

DO NOT overtighten the screws! Doing so can damage the motherboard.

Place this side towards the rear of the chassis
2.2.3 Motherboard layouts

2.3 Central Processing Unit (CPU)

The motherboard comes with dual surface mount LGA 1944 Socket designed for the AMD® Opteron™ 6100 series CPU in the Land Grid Array (LGA) package.

- Upon purchase of the motherboard, ensure that the PnP cap is on the socket and the socket contacts are not bent. Contact your retailer immediately if the PnP cap is missing, or if you see any damage to the PnP cap/socket contacts/motherboard components. ASUS shoulders the repair cost only if the damage is shipment/transit-related.
- Keep the cap after installing the motherboard. ASUS will process Return Merchandise Authorization (RMA) requests only if the motherboard comes with the cap on the Socket 1944.
- The product warranty does not cover damage to the socket contacts resulting from incorrect CPU installation/removal, or misplacement/loss/incorrect removal of the PnP cap.

2.3.1 Installing the CPU

To install a CPU:

1. Locate the CPU socket on the motherboard.

Before installing the CPU, ensure that the socket box is facing toward you and the load lever is on your left.
2. Press the load lever with your thumb (A), then move it to the left (B) until it is released from the retention tab.

To prevent damage to the socket pins, do not remove the PnP cap unless you are installing a CPU.

3. Lift the load lever in the direction of the arrow to a 135° angle.
4. Lift the load plate with your thumb and forefinger to a 100° angle.
5. Remove the PnP cap from the CPU socket.

6. Position the CPU over the socket, ensuring that the gold triangle is on the bottom-right corner of the socket, and then fit the socket alignment key into the CPU notch.

The CPU fits in only one correct orientation. DO NOT force the CPU into the socket to prevent bending the connectors on the socket and damaging the CPU!
7. Close the load plate (A), then push the load lever (B) until it snaps into the retention tab.

Apply some Thermal Interface Material to the exposed area of the CPU that the heatsink will be in contact with, ensuring that it is spread in an even thin layer. Some heatsinks come with pre-applied Thermal Interface Material. If so, skip this step.
2.3.2 Installing the CPU heatsink and fan

The AMD® Opteron™ 6100 series processors require a specially designed heatsink to ensure optimum thermal condition and performance.

- Ensure to use qualified heatsink assembly only.
- Ensure that you have applied the thermal grease to the top of the CPU before installing the heatsink and fan.

To install the CPU heatsink and fan:

1. Place the heatsink on top of the installed CPU, ensuring that the heatsink fits properly on the retention module base.

   - The retention module base is already installed on the motherboard upon purchase.
   - You do not have to remove the retention module base when installing the CPU or installing other motherboard components.
   - If you purchased a separate CPU heatsink and fan assembly, ensure that a Thermal Interface Material is properly applied to the CPU heatsink or CPU before you install the heatsink and fan assembly.

Your boxed CPU heatsink and fan assembly should come with installation instructions for the CPU, heatsink, and the retention mechanism. If the instructions in this section do not match the CPU documentation, follow the latter.
2. Attach one end of the retention bracket to the retention module base.

3. Align the other end of the retention bracket to the retention module base. A clicking sound denotes that the retention bracket is in place. Ensure that the fan and heatsink assembly perfectly fits the retention mechanism module base, otherwise you cannot snap the retention bracket in place.

4. Push down the retention bracket lock on the retention mechanism to secure the heatsink and fan to the module base.
5. When the fan and heatsink assembly is in place, connect the CPU fan cable to the connector on the motherboard labeled CPU_FAN.

- Do not forget to connect the CPU fan connector! Hardware monitoring errors can occur if you fail to plug this connector.
- This connector is backward compatible with old 3-pin CPU fan.

6. Repeat steps 1 to 5 to install the other heatsink if you have installed a second CPU, then connect the fan cable to the other 4-pin connector.
2.4 System memory

2.4.1 Overview

The motherboard comes with sixteen (16) Double Data Rate 3 (DDR3) Dual Inline Memory Modules (DIMM) sockets.

A DDR3 module has the same physical dimensions as a DDR2 DIMM but is notched differently to prevent installation on a DDR2 DIMM socket. DDR3 modules are developed for better performance with less power consumption.

The figure illustrates the location of the DDR3 DIMM sockets:
2.4.2 Memory Configurations

You may install 1GB/2GB/4GB/8GB/16GB Registered or 1GB/2GB/4GB Unbuffered with ECC/Non-ECC DDR3 DIMMs into the DIMM sockets using the memory configurations in this section.

- Always install DIMMs with the same CAS latency. For optimum compatibility, it is recommended that you obtain memory modules from the same vendor.

- For CPU1 configuration, install DIMMs from the orange slots and in the order as follows: DIMM_A2 -> DIMM_C2 -> DIMM_B2 -> DIMM_D2.
For CPU1 + CPU2 configuration, install DIMMs from the orange slots and in the order as follows: DIMM_A2 -> DIMM_E2 -> DIMM_C2 -> DIMM_G2.

- **For Quad Ranks DIMMs, when installing less than or equal to four DIMMs:**
  For CPU1 configuration, install DIMMs to the orange slots and in the order as follows: DIMM_A2 -> DIMM_C2 -> DIMM_B2 -> DIMM_D2.
  For CPU1 + CPU2 configuration, install DIMMs to the orange slots and in the order as follows: DIMM_A2 -> DIMM_E2 -> DIMM_C2 -> DIMM_G2.

- **For Quad Ranks DIMMs, when installing more than four DIMMs:**
  For CPU1 configuration, install DIMMs in the order as follows: DIMM_A2 -> DIMM_C2 -> DIMM_B2 -> DIMM_D2 -> DIMM_A1 -> DIMM_C1 -> DIMM_B1 -> DIMM_D1.
  For CPU1 + CPU2 configuration, install DIMMs in the order as follows: DIMM_A2 -> DIMM_E2 -> DIMM_C2 -> DIMM_G2 -> DIMM_B2 -> DIMM_F2 -> DIMM_D2 -> DIMM_H2 -> DIMM_A1 -> DIMM_E1 -> DIMM_C1 -> DIMM_G1 -> DIMM_B1 -> DIMM_F1 -> DIMM_D1 -> DIMM_H1.

</table>
2.4.3 Installing a DIMM

Unplug the power supply before adding or removing DIMMs or other system components. Failure to do so can cause severe damage to both the motherboard and the components.

To install a DIMM:

1. Press the retaining clips outward to unlock a DIMM socket.
2. Align a DIMM on the socket such that the notch on the DIMM matches the break on the socket.
3. Firmly insert the DIMM into the socket until the retaining clips snap back in place and the DIMM is properly seated.

- A DDR3 DIMM is keyed with a notch so that it fits in only one direction. DO NOT force a DIMM into a socket to avoid damaging the DIMM.
- The DDR3 DIMM sockets do not support DDR and DDR2 DIMMs. DO NOT install DDR or DDR2 DIMMs to the DDR3 DIMM sockets.

2.4.4 Removing a DIMM

To remove a DIMM:

1. Simultaneously press the retaining clips outward to unlock the DIMM.

   Support the DIMM lightly with your fingers when pressing the retaining clips. The DIMM might get damaged when it flips out with extra force.

2. Remove the DIMM from the socket.
2.5 Expansion slots

In the future, you may need to install expansion cards. The following subsections describe the slots and the expansion cards that they support.

Ensure to unplug the power cord before adding or removing expansion cards. Failure to do so may cause you physical injury and damage motherboard components.

2.5.1 Installing an expansion card

To install an expansion card:

1. Before installing the expansion card, read the documentation that came with it and make the necessary hardware settings for the card.
2. Remove the system unit cover (if your motherboard is already installed in a chassis).
3. Remove the bracket opposite the slot that you intend to use. Keep the screw for later use.
4. Align the card connector with the slot and press firmly until the card is completely seated on the slot.
5. Secure the card to the chassis with the screw you removed earlier.
6. Replace the system cover.

2.5.2 Configuring an expansion card

After installing the expansion card, configure it by adjusting the software settings.

1. Turn on the system and change the necessary BIOS settings, if any. See Chapter 4 for information on BIOS setup.
2. Assign an IRQ to the card. Refer to the tables on the next page.
3. Install the software drivers for the expansion card.

When using PCI cards on shared slots, ensure that the drivers support "Share IRQ" or that the cards do not need IRQ assignments. Otherwise, conflicts will arise between the two PCI groups, making the system unstable and the card inoperable.
2.5.3 Interrupt assignments

Standard Interrupt assignments

* These IRQs are usually available for ISA or PCI devices.
2.5.4 MIO/PCIE slot

The MIO/PCIE slot supports a MIO audio card or a PCI Express card. The MIO audio card offers great sound quality to complement the robust video power.

2.5.5 PCI Express x16 slots (x16 link; x8 link)

The onboard PCI Express x16 slots provides two x16 link or one x16 link and two x8 links to AMD SR5690 chipset. These slots support VGA cards and various server class high performance add-on cards.

2.5.6 PCI slot

The PCI slot supports cards such as a LAN card, SCSI card, USB card, and other cards that comply with PCI specifications.

2.5.7 PIKE slot

The PIKE slot allows you to choose and change your preferred SAS solution easily. Install an optional ASUS PIKE RAID card based on your needs.

The PIKE Interface is for ASUS PIKE RAID card only.
2.5.8 Installing an ASUS PIKE RAID card

Follow the steps below to install an optional ASUS RAID card on your motherboard.

1. Locate the PIKE RAID card slot on the motherboard.

2. Align the golden fingers of the RAID card with the PIKE RAID card slot.

3. Insert the RAID card into the PIKE RAID card slot. Ensure that it is completely seated on the PIKE RAID card slot.
2.5.9 Installing i Button

Follow the steps below to install an optional i Button on your motherboard.

1. Locate the i Button slot on the motherboard.

2. Snap the i Button in place.

You need to install i Button before using PIKE 1078 functions.

2.5.10 Installing ASMB4 management board

Follow the steps below to install an optional ASMB4 management board on your motherboard.

1. Locate the BMC_FW header on the motherboard.

2. Orient and press the ASMB4 management card in place.
2.5.11  Connecting the thermal sensor cable

Follow the steps below to connect the thermal sensor cable to the connector on your motherboard.

1. Locate the TR1 or TR2 connector on the motherboard.

2. Connect the thermal sensor cable to the connector.

3. Place the other end of the thermal sensor cable to the device you would like to monitor temperature.

2.5.12  Installing the audio card

1. Locate the MIO/PCIE slot on the motherboard.

2. Align the card connector with the slot and press firmly until the card sits on the slot completely.
2.6 Jumpers

1. Clear RTC RAM (CLRTC1)
   This jumper allows you to clear the Real Time Clock (RTC) RAM in CMOS. You can clear the CMOS memory of date, time, and system setup parameters by erasing the CMOS RTC RAM data. The onboard button cell battery powers the RAM data in CMOS, which include system setup information such as system passwords.

   To erase the RTC RAM:
   1. Turn OFF the computer and unplug the power cord.
   2. Move the jumper cap from pins 1–2 (default) to pins 2–3. Keep the cap on pins 2–3 for about 5–10 seconds, then move the cap back to pins 1–2.
   3. Plug the power cord and turn ON the computer.
   4. Hold down the <Del> key during the boot process and enter BIOS setup to re-enter data.

   Except when clearing the RTC RAM, never remove the cap on CLRTC jumper default position. Removing the cap will cause system boot failure!

   If the steps above do not help, remove the onboard battery and move the jumper again to clear the CMOS RTC RAM data. After the CMOS clearance, reinstall the battery.
2. **VGA controller setting (3-pin VGA_SW1)**

This jumper allows you to enable or disable the onboard VGA controller. Set to pins 1–2 to activate the VGA feature.

![KGPE-D16 VGA setting](image)

3. **CPU Fan and Chassis Fan control setting (3-pin CPUFAN_SEL1, CHAFAN_SEL1)**

These jumpers allow you to switch for fan pin selection. The CPUFAN_SEL1 jumper is for the CPU fans control and the CHAFAN_SEL1 jumper is for the front fans and rear fans control. Set to pins 1–2 when using 4-pin fans or pins 2–3 when using 3-pin fans.

![KGPE-D16 FAN setting](image)

- If you use a 4-pin fan but set the jumper to pin 2-3, the fan you installed may not work.
- If you use a 3-pin fan but set the jumper for a 4-pin fan, the fan control will not work and the fan you installed will always run at full speed.
4. **LAN controller setting (3-pin LAN_SW1, LAN_SW2)**

These jumpers allow you to enable or disable the onboard Intel® 82574L Gigabit LAN controllers. Set to pins 1-2 to activate the Gigabit LAN feature.

![LAN controller setting diagram](image)

5. **DDR3 voltage control setting (4-pin LVDDR3_SEL1; LVDDR3_SEL2)**

These jumpers allow you to adjust the DIMM voltage. Set to pins 1–2 to select 1.5V BIOS control, pins 2–3 to select 1.2V Force or 3–4 to select 1.35V Force.

![DDR3 voltage control setting diagram](image)
6. **PCI Express slot setting (3-pin PCIE2_SW1; PCIE5_SW1)**

These jumpers allow you to turn off slot 1 or 4 no matter slot 2 or 5 is occupied or not. Place the jumper caps on pins 1–2 to let the system detect if the slot 2 or slot 5 is occupied, and turn off slot 1 or 4 automatically (default). Or you can place the jumper caps on pins 2–3 to turn off slot 1 or 4.

7. **IPMI setting (3-pin IPMI_SEL1)**

This jumper allows you to use the IPMI feature through the dedicated LAN or share LAN. Place the jumper caps on pins 1–2 if you want to use IPMI through the dedicated LAN (default). Or you can place the jumper caps on pins 2–3 to use IPMI through the shared LAN.
8. **Force BIOS recovery setting (3-pin RECOVERY1)**

This jumper allows you to quickly update or recover the BIOS settings when it becomes corrupted.

To update the BIOS:

1. Set the jumper to pins 2–3.
2. Insert the USB flash that contains the original or latest BIOS and turn on the system to recover or update the BIOS.
3. Shut down the system.
4. Set the jumper back to pins 1–2.
5. Turn on the system.
2.7 Connectors

2.7.1 Rear panel connectors

1. **PS/2 mouse port (green).** This port is for a PS/2 mouse.

2. **RJ-45 port for iKVM.** This RJ-45 port functions only when you install ASMB4 management card.

3. **PS/2 keyboard port (purple).** This port is for a PS/2 keyboard.

4. **USB 2.0 ports 1 and 2.** These two 4-pin Universal Serial Bus (USB) ports are available for connecting USB 2.0 devices.

5. **Serial (COM1) port.** This 9-pin communication port is for pointing devices or other serial devices.

6. **Video Graphics Adapter port.** This port is for a VGA monitor or other VGA-compatible devices.

7. **LAN 1 (RJ-45) port.** This port allows Gigabit connection to a Local Area Network (LAN) through a network hub. Refer to the table below for the LAN port LED indications.

8. **LAN 2 (RJ-45) port.** This port allows Gigabit connection to a Local Area Network (LAN) through a network hub. Refer to the table below for the LAN port LED indications.

**LAN port LED indications**

2.7.2 Internal connectors

1. Serial ATA connectors
   (7-pin SATA1, SATA2, SATA3, SATA4; RED)
   (7-pin SATA5, SATA6; Black)
Supported by the AMD® SP5100 chipset, these connectors are for the Serial ATA signal cables for Serial ATA hard disk drives that allows up to 3Gb/s of data transfer rate.

The actual data transfer rate depends on the speed of Serial ATA hard disks installed.
2. **SAS connectors**  
(7-pin SAS1, SAS2, SAS3, SAS4; Red)  
(7-pin SAS5, SAS6, SAS7, SAS8; Blue)  
This motherboard comes with eight (8) Serial Attached SCSI (SAS) connectors, the next-generation storage technology that supports both Serial Attached SCSI (SAS) and Serial ATA (SATA). Each connector supports one device.

- These connectors function only when you install a PIKE RAID card.
- Connect the SAS hard disk drives to SAS connectors 1–4 (red) when installing a 4-port PIKE RAID card.

![KGPE-D16 SAS connectors](image)

3. **Hard disk activity LED connector (4-pin HDLED1)**  
This LED connector is for the storage add-on card cable connected to the SATA or SAS add-on card. The read or write activities of any device connected to the SATA or SAS add-on card causes the front panel LED to light up.

![KGPE-D16 Hard disk activity LED connector](image)
4. **USB connector (10-1 pin USB34, USB56; USB78; A-Type USB9)**

These connectors are for USB 2.0 ports. Connect the USB module cables to connectors USB34 and USB56, then install the modules to a slot opening at the back of the system chassis. These USB connectors comply with USB 2.0 specification that supports up to 480 Mbps connection speed.

![KGPE-D16 USB 2.0 connectors](image1)

5. **Thermal sensor cable connectors (3-pin TR1, TR2)**

These connectors are for temperature monitoring. Connect the thermal sensor cables to these connectors and place the other ends to the devices, which you want to monitor temperature.

![KGPE-D16 Thermal sensor cable connectors](image2)
6. **CPU, front and rear fan connectors**  
(4-pin CPU_FAN1, CPU_FAN2, FRNT_FAN1, FRNT_FAN2, FRNT_FAN3, FRNT_FAN4, FRNT_FAN5, REAR_FAN1)

The fan connectors support cooling fans of 350 mA–740 mA (8.88 W max.) or a total of 3.15 A–6.66 A (53.28 W max.) at +12V. Connect the fan cables to the fan connectors on the motherboard, ensuring that the black wire of each cable matches the ground pin of the connector.

- DO NOT forget to connect the fan cables to the fan connectors. Insufficient air flow inside the system may damage the motherboard components.
- These are not jumpers! DO NOT place jumper caps on the fan connectors!
- All fans feature the ASUS Fan Speed technology.
7. **Serial General Purpose Input/Output connectors (8-1 pin SGPIO1/2)**
These connectors are used for the SAS chip SGPIO interface that controls the LED pattern generation, device information and general purpose data.

These connectors functions only when you install an ASUS PIKE SAS RAID card.

8. **Serial General Purpose Input/Output connectors (8-1 pin SGPIO3/4)**
These connectors are used for the SGPIO peripherals of the PROMISE® RAID SATA LED.
9. **IEEE 1394a port connector (10-1 pin IE1394_2)**

This connector is for an IEEE 1394a port. Connect the IEEE 1394a module cable to this connector, then install the module to a slot opening at the back of the system chassis.

![KGPE-D16 IEEE1394 connector](image)

10. **Serial port connector (10-1 pin COM2)**

This connector is for a serial (COM) port. Connect the serial port module cable to this connector, then install the module to a slot opening at the back of the system chassis.

![KGPE-D16 Serial port connector](image)
11. **BMC header (BMC_FW1)**

The BMC connector on the motherboard supports an ASUS® Server Management Board 4 Series (ASMB4).

![BMC header](image)

12. **TPM connector (20-1 pin TPM)**

This connector supports a Trusted Platform Module (TPM) system, which can securely store keys, digital certificates, passwords, and data. A TPM system also helps enhance network security, protects digital identities, and ensures platform integrity.

![TPM connector](image)
13. **Location LED cable connector (3-pin LOCLED1)**
   This connector is for a LED cable that allows you to know the server location.

![KGPE-D16 Location LED cable connector](image)

14. **Power Supply SMBus connector (5-pin PSUSMB1)**
   This connector allows you to connect SMBus (System Management Bus) to the power supply unit to read PSU information. Devices communicate with an SMBus host and/or other SMBus devices using the SMBus interface.

![KGPE-D16 Power supply SMBus connector](image)

   This connector functions only when you install the ASUS ASMB4.
15. SSI power connectors
(24-pin SSIPWR1, 8-pin SSI12V1, 8-pin SSI12V2)

These connectors are for an SSI power supply plugs. The power supply plugs are designed to fit these connectors in only one orientation. Find the proper orientation and push down firmly until the connectors completely fit.

- DO NOT forget to connect the 24+8+8-pin power plugs; otherwise, the system will not boot up.
- Use of a PSU with a higher power output is recommended when configuring a system with more power-consuming devices. The system may become unstable or may not boot up if the power is inadequate.
- Ensure that your power supply unit (PSU) can provide at least the minimum power required by your system.
16. System panel connector (20-pin PANEL1)
This connector supports several chassis-mounted functions.

1. **System power LED (3-pin PLED)**
   This 3-pin connector is for the system power LED. Connect the chassis power LED cable to this connector. The system power LED lights up when you turn on the system power, and blinks when the system is in sleep mode.

2. **Message LED (2-pin MLED)**
   This 2-pin connector is for the message LED cable that connects to the front message LED. The message LED is controlled by Hardware monitor to indicate an abnormal event occurrence.

3. **System warning speaker (4-pin SPEAKER)**
   This 4-pin connector is for the chassis-mounted system warning speaker. The speaker allows you to hear system beeps and warnings.

4. **Hard disk drive activity LED (2-pin HDDLED)**
   This 2-pin connector is for the HDD Activity LED. Connect the HDD Activity LED cable to this connector. The IDE LED lights up or flashes when data is read from or written to the HDD.

5. **SSI power button/soft-off button (2-pin PWRSW)**
   This connector is for the system power button. Pressing the power button turns the system on or puts the system in sleep or soft-off mode depending on the BIOS settings. Pressing the power switch for more than four seconds while the system is ON turns the system OFF.

6. **Reset button (2-pin RESET)**
   This 2-pin connector is for the chassis-mounted reset button for system reboot without turning off the system power.
17. **Auxiliary panel connector (20-pin AUX_PANEL1)**

   This connector is for additional front panel features including front panel SMB, locator LED and switch, chassis intrusion, and LAN LEDs.

   - **Front panel SMB (6-1 pin FPSMB)**
     These leads connect the front panel SMBus cable.

   - **LAN activity LED (2-pin LAN1_LED, LAN2_LED)**
     These leads are for Gigabit LAN activity LEDs on the front panel.

   - **Chassis intrusion (4-1 pin CHASSIS)**
     These leads are for the intrusion detection feature for chassis with intrusion sensor or microswitch. When you remove any chassis component, the sensor triggers and sends a high-level signal to these leads to record a chassis intrusion event. The default setting is short CASEOPEN and GND pin by jumper cap to disable the function.

   - **Locator LED (2-pin LOCATORLED1 and 2-pin LOCATORLED2)**
     These leads are for the locator LED1 and LED2 on the front panel. Connect the Locator LED cables to these 2-pin connector. The LEDs will light up when the Locator button is pressed.

   - **Locator Button/Swich (2-pin LOCATORBTN)**
     These leads are for the locator button on the front panel. This button queries the state of the system locator.
This chapter describes the power up sequence, and ways of shutting down the system.
Chapter summary

3.1 Starting up for the first time......................................................... 3-3
3.2 Powering off the computer......................................................... 3-4
3.1 Starting up for the first time

1. After making all the connections, replace the system case cover.

2. Be sure that all switches are off.

3. Connect the power cord to the power connector at the back of the system chassis.

4. Connect the power cord to a power outlet that is equipped with a surge protector.

5. Turn on the devices in the following order:
   a. Monitor
   b. External storage devices (starting with the last device on the chain)
   c. System power

6. After applying power, the system power LED on the system front panel case lights up. For systems with ATX power supplies, the system LED lights up when you press the ATX power button. If your monitor complies with “green” standards or if it has a “power standby” feature, the monitor LED may light up or switch between orange and green after the system LED turns on.
   The system then runs the power-on self-test or POST. While the tests are running, the BIOS beeps or additional messages appear on the screen. If you do not see anything within 30 seconds from the time you turned on the power, the system may have failed a power-on test. Check the jumper settings and connections or call your retailer for assistance.

7. At power on, hold down the <Del> key to enter the BIOS Setup. Follow the instructions in Chapter 4.
3.2 Powering off the computer

3.2.1 Using the OS shut down function

If you are using Windows® 2003 Server:

1. Click the Start button then click Shut Down.
2. Select Shut Down from the What do you want the computer to do? list box.
4. Make sure that the Planned check box is checked.
5. Select shutdown option from the list box.
6. If necessary, key in comments.
7. Click OK.

3.2.2 Using the dual function power switch

While the system is ON, pressing the power switch for less than four seconds puts the system to sleep mode or to soft-off mode, depending on the BIOS setting. Pressing the power switch for more than four seconds lets the system enter the soft-off mode regardless of the BIOS setting. Refer to section 4.6 Power Menu in Chapter 4 for details.
This chapter tells how to change the system settings through the BIOS Setup menus. Detailed descriptions of the BIOS parameters are also provided.
### Chapter summary

Managing and updating your BIOS

4.1 Managing and updating your BIOS

The following utilities allow you to manage and update the motherboard Basic Input/Output System (BIOS) setup:

1. **ASUS EZ Flash 2** (Updates the BIOS using a USB flash disk.)
2. **BUPDATER utility** (Updates the BIOS in DOS mode using a bootable USB flash disk drive.)
3. **ASUS CrashFree BIOS 3** (To recover the BIOS using a bootable USB flash disk drive when the BIOS file fails or gets corrupted.)

Refer to the corresponding sections for details on these utilities.

Save a copy of the original motherboard BIOS file to a bootable USB flash disk drive in case you need to restore the BIOS in the future. Copy the original motherboard BIOS using the ASUS Update or AFUDOS utilities.

4.1.1 ASUS EZ Flash 2 utility

The ASUS EZ Flash 2 feature allows you to update the BIOS without having to use a DOS-based utility.

Before you start using this utility, download the latest BIOS from the ASUS website at www.asus.com.

To update the BIOS using EZ Flash 2

1. Insert the USB flash disk that contains the latest BIOS file to the USB port.
2. Enter the BIOS setup program. Go to the Tools menu to select EZ Flash 2 and press <Enter> to enable it.
   Or, press <Alt> + <F2> during the POST to enable EZ Flash 2.
3. Press <Tab> to switch between drives until the correct BIOS file is found. When found, EZ Flash 2 performs the BIOS update process and automatically reboots the system when done.

- This function can support devices such as a USB flash disk with FAT 32/16 format and single partition only.
- DO NOT shut down or reset the system while updating the BIOS to prevent system boot failure!

Ensure to load the BIOS default settings to ensure system compatibility and stability. Select the Load Setup Defaults item under the Exit menu. See section 4.9 Exit Menu for details.

4.1.2 BUPDATER utility

The succeeding BIOS screens are for reference only. The actual BIOS screen displays may not be the same as shown.

The BUPDATER utility allows you to update the BIOS file in DOS environment using a bootable USB flash disk drive with the updated BIOS file.

Updating the BIOS file
To update the BIOS file using the BUPDATER utility:

1. Visit the ASUS website at www.asus.com and download the latest BIOS file for the motherboard. Save the BIOS file to a bootable USB flash disk drive.
2. Copy the BUPDATER utility (BUPDATER.exe) from the ASUS support website at support.asus.com to the bootable USB flash disk drive you created earlier.
3. Boot the system in DOS mode, then at the prompt, type:

```
BUPDATER /i[filename].ROM
```

where [filename] is the latest or the original BIOS file on the bootable USB flash disk drive, then press <Enter>.

```
A:\>BUPDATER /i[filename].ROM
```
4. The utility verifies the file, then starts updating the BIOS file.

![ASUSTek BIOS Update for DOS V1.06 (09/08/04)](image)

**Note**

**Writing BIOS:**

WARNING! Do not turn off power during flash BIOS

DO NOT shut down or reset the system while updating the BIOS to prevent system boot failure!

5. The utility returns to the DOS prompt after the BIOS update process is completed. Reboot the system from the hard disk drive.

```bash
The BIOS update is finished! Please restart your system.
C:\>
```
4.1.3 ASUS CrashFree BIOS 3 utility

The ASUS CrashFree BIOS 3 is an auto recovery tool that allows you to restore the BIOS file when it fails or gets corrupted during the updating process. You can update a corrupted BIOS file using a USB flash drive that contains the updated BIOS file.

Prepare a USB flash drive containing the updated motherboard BIOS before using this utility.

Recovering the BIOS from a USB flash drive

To recover the BIOS from a USB flash drive:

1. Insert the USB flash drive with the original or updated BIOS file to one USB port on the system.
2. The utility will automatically recover the BIOS. It resets the system when the BIOS recovery finished.

DO NOT shut down or reset the system while recovering the BIOS! Doing so would cause system boot failure!

The recovered BIOS may not be the latest BIOS version for this motherboard. Visit the ASUS website at www.asus.com to download the latest BIOS file.
4.2 BIOS setup program

This motherboard supports a programmable firmware chip that you can update using the provided utility described in section 4.1 Managing and updating your BIOS.

Use the BIOS Setup program when you are installing a motherboard, reconfiguring your system, or prompted to “Run Setup.” This section explains how to configure your system using this utility.

Even if you are not prompted to use the Setup program, you can change the configuration of your computer in the future. For example, you can enable the security password feature or change the power management settings. This requires you to reconfigure your system using the BIOS Setup program so that the computer can recognize these changes and record them in the CMOS RAM of the firmware chip.

The firmware chip on the motherboard stores the Setup utility. When you start up the computer, the system provides you with the opportunity to run this program. Press <Del> during the Power-On Self-Test (POST) to enter the Setup utility; otherwise, POST continues with its test routines.

If you wish to enter Setup after POST, restart the system by pressing <Ctrl+Alt+Delete>, or by pressing the reset button on the system chassis. You can also restart by turning the system off and then back on. Do this last option only if the first two failed.

The Setup program is designed to make it as easy to use as possible. Being a menu-driven program, it lets you scroll through the various submenus and make your selections from the available options using the navigation keys.

- The default BIOS settings for this motherboard apply for most conditions to ensure optimum performance. If the system becomes unstable after changing any BIOS settings, load the default settings to ensure system compatibility and stability. Select the Load Setup Defaults item under the Exit Menu. See section 4.9 Exit Menu.
- The BIOS setup screens shown in this section are for reference purposes only, and may not exactly match what you see on your screen.
- Visit the ASUS website (www.asus.com) to download the latest BIOS file for this motherboard.
4.2.1 BIOS menu screen

4.2.2 Menu bar

The menu bar on top of the screen has the following main items:

- **Main**: For changing the basic system configuration
- **Advanced**: For changing the advanced system settings
- **Server**: For changing the advanced server settings
- **Power**: For changing the advanced power management (APM) configuration
- **Boot**: For changing the system boot configuration
- **Tools**: For configuring options for special functions
- **Exit**: For selecting the exit options and loading default settings

To select an item on the menu bar, press the right or left arrow key on the keyboard until the desired item is highlighted.

4.2.3 Navigation keys

At the bottom right corner of a menu screen are the navigation keys for that particular menu. Use the navigation keys to select items in the menu and change the settings.

The navigation keys differ from one screen to another.
4.2.4 Menu items

The highlighted item on the menu bar displays the specific items for that menu. For example, selecting Main shows the Main menu items.

The other items (Advanced, Power, Boot, and Exit) on the menu bar have their respective menu items.

4.2.5 Submenu items

A solid triangle before each item on any menu screen means that the item has a submenu. To display the submenu, select the item and press <Enter>.

4.2.6 Configuration fields

These fields show the values for the menu items. If an item is user-configurable, you can change the value of the field opposite the item. You cannot select an item that is not user-configurable.

A configurable field is enclosed in brackets, and is highlighted when selected. To change the value of a field, select it then press <Enter> to display a list of options. Refer to 4.2.7 Pop-up window.

4.2.7 Pop-up window

Select a menu item then press <Enter> to display a pop-up window with the configuration options for that item.

4.2.8 Scroll bar

A scroll bar appears on the right side of a menu screen when there are items that do not fit on the screen. Press the Up/Down arrow keys or <Page Up> /<Page Down> keys to display the other items on the screen.

4.2.9 General help

At the top right corner of the menu screen is a brief description of the selected item.
4.3 Main menu

When you enter the BIOS Setup program, the Main menu screen appears, giving you an overview of the basic system information.

Refer to section 4.2.1 BIOS menu screen for information on the menu screen items and how to navigate through them.

4.3.1 System Time [xx:xx:xx]

Allows you to set the system time.

4.3.2 System Date [Day xx/xx/xxxx]

Allows you to set the system date.
4.3.3 SATA1–6

The items in this menu allow you to set or change the configurations for the SATA devices installed in the system. Select an item then press <Enter> if you wish to configure the item.

The BIOS automatically detects the values opposite the dimmed items (Device, Vendor, Size, LBA Mode, Block Mode, PIO Mode, Async DMA, Ultra DMA, and S.M.A.R.T. monitoring). These values are not user-configurable. These items show Not Detected if no SATA device is installed in the system.

Type [Auto]

Selects the type of SATA drive. Setting to [Auto] allows automatic selection of the appropriate SATA device type. Select [CDROM] if you are specifically configuring a CD-ROM drive. Select [ARMD] (ATAPI Removable Media Device) if your device is either a ZIP, LS-120, or MO drive. Configuration options: [Not Installed] [Auto] [CDROM] [ARMD]

LBA/Large Mode [Auto]

Enables or disables the LBA mode. Setting to [Auto] enables the LBA mode if the device supports this mode, and if the device was not previously formatted with LBA mode disabled. Configuration options: [Disabled] [Auto]

Block (Multi-Sector Transfer) M [Auto]

Enables or disables data multi-sectors transfers. When set to [Auto], the data transfer from and to the device occurs multiple sectors at a time if the device supports multi-sector transfer feature. When set to [Disabled], the data transfer from and to the device occurs one sector at a time. Configuration options: [Disabled] [Auto]
PIO Mode [Auto]
Allows you to select the data transfer mode.
Configuration options: [Auto] [0] [1] [2] [3] [4]

DMA Mode [Auto]
DMA (Direct Memory Access) allows your computer to transfer data to and from the hardware devices installed with much less CPU overhead.
The DMA mode consists of SDMA (single-word DMA), MDMA (multi-word DMA), and UDMA (Ultra DMA). Setting to [Auto] allows automatic selection of the DMA mode.

SMART Monitoring [Auto]
Sets the Smart Monitoring, Analysis, and Reporting Technology.
Configuration options: [Auto] [Disabled] [Enabled]

32Bit Data Transfer [Enabled]
Enables or disables 32-bit data transfer.
Configuration options: [Disabled] [Enabled]

4.3.4 Storage Configuration
The items in this menu allow you to set or change the configurations for the SATA devices installed in the system. Select an item then press <Enter> if you wish to configure the item.

OnChip SATA Channel [Enabled]
Allows you to enable or disable the onboard SATA channel.
Configuration options: [Disabled] [Enabled]
The following two items appear only when you set the **OnChip SATA Channel** item to [Enabled].

### SATA Port1 - Port4 [IDE]
Sets the configuration for the Serial ATA connectors supported by the Southbridge chip. Configuration options: [IDE] [RAID] [AHCI]

- If you want to use the Serial ATA hard disk drives as Parallel ATA physical storage devices, keep the default setting [IDE].
- If you want to create RAID sets with the PROMISE® RAID utility from the Serial ATA hard disk drives, set this item to [RAID].
- If you want the Serial ATA hard disk drives to use the Advanced Host Controller Interface (AHCI), set this item to [AHCI]. The AHCI allows the onboard storage driver to enable advanced Serial ATA features that increases storage performance on random workloads by allowing the drive to internally optimize the order of commands.
- When this item is set [AHCI], the information of the SATA connectors 1–6 can be seen only under the OS environment or during POST.

### SATA Port5 - Port6 [IDE]
Setting this item to [IDE] instead of [RAID] or [AHCI] allows the system to recognize the optical drives connected to the SATA connectors 5 or 6 when installing OS.

If you use a SATA optical drive to run the OS installation disk, we strongly recommend that you install the optical drive to the SATA connectors 5/6 and set them to [IDE] mode.

### 4.3.5 System Information
This menu gives you an overview of the general system specifications. The BIOS automatically detects the items in this menu.

<table>

4.4 Advanced menu

The Advanced menu items allow you to change the settings for the CPU and other system devices.

Take caution when changing the settings of the Advanced menu items. Incorrect field values can cause the system to malfunction.

4.4.1 CPU Configuration

The items in this menu show the CPU-related information that the BIOS automatically detects. Some items may not appear if your CPU does not support the related functions.

Scroll down for more items.
GART Error Reporting [Disabled]
This option should remain disabled for the normal operation. The driver developer may enable it for testing purpose. Configuration options: [Disabled] [Enabled]

Microcode Updation [Enabled]
Allows the system to update the Microcode automatically, enhancing system performance. Configuration options: [Disabled] [Enabled]

Secure Virtual Machine Mode [Enabled]
Allows you to enable or disable the AMD Secure Virtual Machine. Configuration options: [Disabled] [Enabled]

PowerNow [Enabled]
Allows you to enable or disable the generation of ACPI_PPC/_PSS/_PCT objects. Configuration options: [Enabled] [Disabled]

PowerCap [P-state 0]
Allows you to select the highest performance P-state in OS. Configuration options: [P-state 0] [P-state 1] [P-state 2] [P-state 3] [P-state 4]

ACPI SRAT Table [Enabled]
Allows you to enable or disable the building of ACPI SRAT Table. Configuration options: [Enabled] [Disabled]

CPU DownCore Mode [Auto Mode]
Allows you to select the CPU core level. Configuration options: [Auto Mode] [Maximum Core Level] [No Leveling] [2 Cores] [4 Cores] [6 Cores] [8 Cores] [10 Cores] [12 Cores]

C1E Support [Enabled]
Allows you to enable or disable the C1E support function. This item should be enabled in order to enable the Enhanced Halt State. Configuration options: [Disabled] [Enabled]

CPU2 [Enabled]
Allows you to enable or disable CPU2. Configuration options: [Enabled] [Disabled]
4.4.2 Chipset Configuration

The Chipset configuration menu allows you to change advanced chipset settings. Select an item then press <Enter> to display the submenu.

Configuration options: [Disabled] [Enabled]

**Channel B/C/D/E/F/G/H [Enabled]**
Allows you to enable or disable channel B/C/D/E/F/G/H.
Configuration options: [Disabled] [Enabled]
ECC Configuration

Set the level of ECC protection. Note: The 'Super' ECC mode dynamically sets the DRAM scrub rate so all of memory is scrubbed in 8 hours.

ECC Mode [Basic]
Disables or sets the DRAM ECC mode that allows the hardware to report and correct memory errors.
Configuration options: [Disabled] [Basic] [Good] [Super] [Max] [User]

DRAM Timing Configuration

Allows you to select the DRAM timing mode. Configuration options: [Auto] [Manual]

Memory Clock Speed [400 MHz]
This item appears only when you set the DRAM Timing Config item to [Manual] and allows you to set the memory clock frequency.
Configuration options: [400 MHz] [533 MHz] [667 MHz]

Memory Timing Parameters [CPU Node 1]
Allows you to select which node's timing parameters to display.

</table>

### Serial Port1 Address [3F8/IRQ4]
Allows you to select the Serial Port1 base address.
Configuration options: [Disabled] [3F8/IRQ4] [3E8/IRQ4] [2E8/IRQ3]

### Serial Port2 Address [2F8/IRQ3]
Allows you to select the Serial Port2 base address.
Configuration options: [Disabled] [2F8/IRQ3] [3E8/IRQ4] [2E8/IRQ3]

### Onboard 1394 Controller [Enabled]
Enables or disables the onboard IEEE 1394 controller.
Configuration options: [Disabled] [Enabled]

### Onboard LAN1/LAN2 Chip [Enabled]
Enables or disables the onboard LAN1/2 controller.
Configuration options: [Disabled] [Enabled]

> The following items appear only when you set Onboard LAN1/LAN2 Chip to [Enabled].

### Onboard LAN1/LAN2 Boot [PXE]
Allows you to configure the onboard LAN1/2 boot mode.
Configuration options: [Disabled] [PXE] [iSCSI]
### USB Configuration

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>USB Configuration</td>
<td>Enables support for legacy USB. AUTO option disables legacy support if no USB devices are connected.</td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>USB Devices Enabled:</td>
<td>None</td>
</tr>
<tr>
<td>Legacy USB Support</td>
<td>[Enabled]</td>
</tr>
<tr>
<td>USB 2.0 Controller Mode</td>
<td>[HiSpeed]</td>
</tr>
<tr>
<td>BIOS EHCI Hand-Off</td>
<td>[Enabled]</td>
</tr>
<tr>
<td>Legacy USB1.1 HC Support</td>
<td>[Enabled]</td>
</tr>
</tbody>
</table>

The **USB Devices Enabled** item shows the auto-detected values. If no USB device is detected, the item shows **None**.

**Legacy USB Support [Enabled]**

Allows you to enable or disable support for legacy USB devices. Setting to [Auto] allows the system to detect the presence of USB devices at startup. If detected, the USB controller legacy mode is enabled. If no USB device is detected, the legacy USB support is disabled. Configuration options: [Disabled] [Enabled] [Auto]

**USB 2.0 Controller Mode [HiSpeed]**

Allows you to set the USB 2.0 controller to HiSpeed (480Mbps) or FullSpeed (12Mbps). Configuration options: [FullSpeed] [HiSpeed]

**BIOS EHCI Hand-Off [Enabled]**

Enables or disables the BIOS EHCI hand-off support. Configuration options: [Disabled] [Enabled]

The following item appears only when you set **Legacy USB Support** to [Enabled] and [Auto].

**Legacy USB1.1 HC Support [Enabled]**

This item appears only when you set Legacy USB Support to [Enabled], and allows you to configure the Legacy USB1.1 HC support. Configuration options: [Disabled] [Enabled]
4.4.5 PCIPnP

The PCIPnP menu items allow you to change the advanced settings for PCI/PnP devices.

Take caution when changing the settings of the PCI/PnP Configuration menu items. Incorrect field values can cause the system to malfunction.

Plug And Play O/S [No]

When set to [No], BIOS configures all the devices in the system. When set to [Yes] and if you install a Plug and Play operating system, the operating system configures the Plug and Play devices not required for boot.

Configuration options: [No] [Yes]

4.4.6 Event Log Configuration

View Event Log
Press <Enter> to read all the unread event log.

Clear Event Log
Press <Enter> to clear all events on the event log.
## 4.5 Server menu

The items in this menu allows you to configure the Remote Access features. Select an item then press <Enter> to display the configuration options.

### Remote Access Configuration

Enables or disables the remote access feature. Configuration options: [Disabled] [Enabled]

### Remote Access [Enabled]

Configure Remote Access type and parameters:

- **Remote Access**: [Enabled]
- **Serial port number**: [COM2]
- **Base Address, IRQ**: [2F8h, 3]
- **Serial Port Mode**: [57600 8,n,1]
- **Flow Control**: [Hardware]
- **Redirection After BIOS POST**: [Disabled]
- **Terminal Type**: [VT-UTF8]
Serial port number [COM2]
Selects the serial port for console redirection.
Configuration options: [COM1] [COM2]

Base Address, IRQ [2F8h, 3]
This item is not user-configurable and changes with the configuration of Serial port number.

Serial Port Mode [57600 8,n,1]
Sets the Serial port mode.
Configuration options: [115200 8,n,1] [57600 8,n,1] [38400 8,n,1] [19200 8,n,1] [9600 8,n,1]

Flow Control [Hardware]
Allows you to select the flow control for console redirection.
Configuration options: [None] [Hardware] [Software]

Redirection After BIOS POST [Disabled]
Sets the redirection mode after the BIOS Power-On Self-Test (POST). Some operating systems may not work when set to [Always].
Configuration options: [Disabled] [Boot Loader] [Always]

Terminal Type [VT-UTF8]
Allows you to select the target terminal type.
Configuration options: [ANSI] [VT100] [VT-UTF8]
4.6 Power menu

The Power menu items allow you to change the settings for the Advanced Power Management (APM). Select an item then press <Enter> to display the configuration options.

<table>
<thead>
<tr>
<th>Main</th>
<th>Advanced</th>
<th>Server</th>
<th>Power</th>
<th>Boot</th>
<th>Tools</th>
<th>Exit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>

<td>ACPI APIC support</td>
</tr>
<tr>
<td>APM Configuration</td>
<td></td>
<td>Hardware Monitor</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

4.6.1 Suspend Mode [Auto]

Allows you to select the Advanced Configuration and Power Interface (ACPI) state to be used for system suspend.

Configuration options: [S1 (POS) only] [S3 only] [Auto]

4.6.2 Repost Video on S3 Resume [No]

Determines whether to invoke VGA BIOS POST on S3/STR resume.

Configuration options: [No] [Yes]

4.6.3 ACPI 2.0 Support [ACPI v2.0]

Specifies the Advanced Configuration and Power Interface (ACPI) version supported.

Configuration options: [ACPI v1.0] [ACPI v2.0] [ACPI v3.0]

4.6.4 ACPI APIC support [Enabled]

Allows you to enable or disable the Advanced Configuration and Power Interface (ACPI) support in the Advanced Programmable Interrupt Controller (APIC). When set to Enabled, the ACPI APIC table pointer is included in the RSDT pointer list.

Configuration options: [Disabled] [Enabled]
4.6.5 APM Configuration

<table>
<thead>
<tr>
<th>Power On Configuration</th>
<th>Options</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restore on AC Power Loss [Last State]</td>
<td>Power On</td>
</tr>
<tr>
<td>Resume On PCIE Wake# [Disabled]</td>
<td>Power off</td>
</tr>
<tr>
<td>Resume On Ring [Disabled]</td>
<td>Last State</td>
</tr>
<tr>
<td>Resume On RTC Alarm [Disabled]</td>
<td></td>
</tr>
</tbody>
</table>

The following items appear only when the Resume On RTC Alarm item is set to [Enabled].

- **RTC Alarm Date [15]**
  To set the alarm date, highlight this item and press the <+> or <-> key to make the selection.

- **System Time [12:30:30]**
  Use the <ENTER>, <TAB> or <SHIFT-TAB> key to select a field. Use the <+> or <-> key to configure alarm time.
4.6.6 Hardware Monitor

The onboard hardware monitor automatically detects and displays the motherboard component and CPU temperatures. Select [Ignored] if you do not wish to display the detected temperatures.

CPU Fan1/2; Front Fan1–5 Speed [xxxxRPM] or [Ignored] / [N/A]
Rear Fan1 Speed [xxxxRPM] or [Ignored] / [N/A]

The onboard hardware monitor automatically detects and displays the speed of CPU fans, front fans, and rear fan in rotations per minute (RPM). If the fan is not connected to the motherboard, the field shows [N/A].

Fan Speed Control [Generic Mode]
Allows you to configure the ASUS Smart Fan feature that smartly adjusts the fan speeds for more efficient system operation.
Configuration options: [Full Speed Mode] [Whisper Mode] [Generic Mode] [High Density Mode]
VCORE1/2 Voltage; P1/2DDR3 Voltage; P1/2/+1.2V Voltage; P1_VDDNB Voltage; +1.8V Voltage; +1.2V Voltage; +1.1V Voltage; +12V Voltage; +5V Voltage; +3.3V Voltage; +5VSB Voltage; +3.3VSB Voltage; VBAT Voltage [xxxxV] or [ignored]

The onboard hardware monitor automatically detects the voltage output through the onboard voltage regulators. Select [ignored] if you do not want to detect this item.
4.7 Boot menu

The Boot menu items allow you to change the system boot options. Select an item then press <Enter> to display the submenu.

4.7.1 Boot Device Priority

These items specify the boot device priority sequence from the available devices. The number of device items that appears on the screen depends on the number of devices installed in the system.

Configuration options: [Removable Dev.] [ATAPI CD-ROM] [Hard Drive] [Network:IBA GE Slot 0300 v1234] [Network:IBA GE Slot 0200 v1324] [Disabled]

4.7.2 Hard Disk Drives; CDROM Drives

These two items appear only when you install hard disk drives or optical drives to your system. These items allow you to specify the boot priority sequence of the hard disk drives or the optical drives.
4.7.3 Boot Settings Configuration

<table>
<thead>
<tr>
<th>BIOS SET UP UTILITY</th>
<th>Boot Settings Configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quick Boot</td>
<td>[Enabled]</td>
</tr>
<tr>
<td>Full Screen Logo</td>
<td>[Enabled]</td>
</tr>
<tr>
<td>AddOn ROM Display Mode</td>
<td>[Force BIOS]</td>
</tr>
<tr>
<td>Bootup Num-Lock</td>
<td>[On]</td>
</tr>
<tr>
<td>Wait For 'F1' If Error</td>
<td>[Enabled]</td>
</tr>
<tr>
<td>Hit 'DEL' Message Display</td>
<td>[Enabled]</td>
</tr>
<tr>
<td>Boot Device Seeking</td>
<td>[Endless PXE]</td>
</tr>
</tbody>
</table>

Quick Boot [Enabled]
Enabling this item allows the BIOS to skip some power on self tests (POST) while booting to decrease the time needed to boot the system. When set to [Disabled], BIOS performs all the POST items. Configuration options: [Disabled] [Enabled]

Full Screen Logo [Enabled]
Allows you to enable or disable the full screen logo display feature. Configuration options: [Disabled] [Enabled]

AddOn ROM Display Mode [Force BIOS]
Allows you to set the display mode for Options ROM. Configuration options: [Force BIOS] [Keep Current]

Bootup Num-Lock [On]
Allows you to select the power-on state for the NumLock. Configuration options: [Off] [On]

Wait For 'F1' If Error [Enabled]
When set to [Enabled], the system waits for the <F1> key to be pressed when error occurs. Configuration options: [Disabled] [Enabled]

Hit 'DEL' Message Display [Enabled]
When set to [Enabled], the system displays the message “Press DEL to run Setup” during POST. Configuration options: [Disabled] [Enabled]

Interrupt 19 Capture [Enabled]
When set to [Enabled], this function allows the option ROMs to trap Interrupt 19. Configuration options: [Disabled] [Enabled]

Boot Device Seeking [Endless PXE]
When set to [Endless PXE], the system will continuously seek the remote boot image until the boot image is found or the user abort (press <Ctrl> + <Alt> + <Del>). When set to [Normal], the system will seek the remote boot image once. Configuration options: [Endless PXE] [Normal]
4.7.4  Security

The Security menu items allow you to change the system security settings. Select an item then press <Enter> to display the configuration options.

| Security Settings | <Enter> to change password.  
|-------------------|-----------------------------|
| Supervisor Password : Not Installed  
User Password : Not Installed  
Change Supervisor Password  
Change User Password | <Enter> again to disable password.  

---

**Change Supervisor Password**

Select this item to set or change the supervisor password. The **Supervisor Password** item on top of the screen shows the default **Not Installed**. After you set a password, this item shows **Installed**.

To set a Supervisor Password:

1. Select the **Change Supervisor Password** item and press <Enter>.
2. From the password box, type a password composed of at least six letters and/or numbers, then press <Enter>.
3. Confirm the password when prompted.

The message “Password Installed” appears after you successfully set your password.

To change the supervisor password, follow the same steps as in setting a user password.

To clear the supervisor password, select the **Change Supervisor Password** then press <Enter>. The message “Password Uninstalled” appears.

---

If you forget your BIOS password, you can clear it by erasing the CMOS Real Time Clock (RTC) RAM. See section **2.6 Jumpers** for information on how to erase the RTC RAM.
After you have set a supervisor password, the other items appear to allow you to change other security settings.

### User Access Level [Full Access]
This item allows you to select the access restriction to the Setup items. Configuration options: [No Access] [View Only] [Limited] [Full Access]
- **No Access** prevents user access to the Setup utility.
- **View Only** allows access but does not allow change to any field.
- **Limited** allows changes only to selected fields, such as Date and Time.
- **Full Access** allows viewing and changing all the fields in the Setup utility.

### Change User Password
Select this item to set or change the user password. The User Password item on top of the screen shows the default Not Installed. After you set a password, this item shows Installed.

To set a User Password:
1. Select the Change User Password item and press <Enter>.
2. On the password box that appears, type a password composed of at least six letters and/or numbers, then press <Enter>.
3. Confirm the password when prompted.

The message “Password Installed” appears after you set your password successfully.

To change the user password, follow the same steps as in setting a user password.

### Password Check [Setup]
When set to [Setup], BIOS checks for user password when accessing the Setup utility. When set to [Always], BIOS checks for user password both when accessing Setup and booting the system. Configuration options: [Setup] [Always]
4.8 Tools menu

The Tools menu items allow you to configure options for special functions. Select an item then press <Enter> to display the submenu.

ASUS EZ Flash 2

Allows you to run ASUS EZ Flash 2. When you press <Enter>, a confirmation message appears. Use the left/right arrow key to select between [Yes] or [No], then press <Enter> to confirm your choice. Check section 4.1.1 ASUS EZ Flash 2 utility for details.
4.9 Exit menu

The Exit menu items allow you to load the optimal or failsafe default values for the BIOS items, and save or discard your changes to the BIOS items.

<table>
<thead>
<tr>

</tbody>
</table>

v02.61 (C)Copyright 1985-2010, American Megatrends, Inc.

Pressing <Esc> does not immediately exit this menu. Select one of the options from this menu or <F10> from the legend bar to exit.

Exit & Save Changes

Once you are finished making your selections, choose this option from the Exit menu to ensure the values you selected are saved to the CMOS RAM. An onboard backup battery sustains the CMOS RAM so it stays on even when the PC is turned off. When you select this option, a confirmation window appears. Select YES to save changes and exit.

If you attempt to exit the Setup program without saving your changes, the program prompts you with a message asking if you want to save your changes before exiting. Press <Enter> to save the changes while exiting.

Exit & Discard Changes

Select this option only if you do not want to save the changes that you made to the Setup program. If you made changes to fields other than System Date, System Time, and Password, the BIOS asks for a confirmation before exiting.

Discard Changes

This option allows you to discard the selections you made and restore the previously saved values. After selecting this option, a confirmation appears. Select YES to discard any changes and load the previously saved values.

Load Setup Defaults

This option allows you to load the default values for each of the parameters on the Setup menus. When you select this option or if you press <F5>, a confirmation window appears. Select YES to load default values. Select Exit & Save Changes or make other changes before saving the values to the non-volatile RAM.
This chapter provides instructions for setting up, creating, and configuring RAID sets using the available utilities.
Chapter summary

5.1 Setting up RAID ................................................................. 5-3
5.2 FastBuild Utility ............................................................... 5-5
5.1 Setting up RAID

5.1.1 RAID definitions

**RAID 0** *(Data striping)* optimizes two identical hard disk drives to read and write data in parallel, interleaved stacks. Two hard disks perform the same work as a single drive but at a sustained data transfer rate, double that of a single disk alone, thus improving data access and storage. Use of two new identical hard disk drives is required for this setup.

**RAID 1** *(Data mirroring)* copies and maintains an identical image of data from one drive to a second drive. If one drive fails, the disk array management software directs all applications to the surviving drive as it contains a complete copy of the data in the other drive. This RAID configuration provides data protection and increases fault tolerance to the entire system. Use two new drives or use an existing drive and a new drive for this setup. The new drive must be of the same size or larger than the existing drive.

**RAID 10** is data striping and data mirroring combined without parity (redundancy data) having to be calculated and written. With the RAID 10 configuration you get all the benefits of both RAID 0 and RAID 1 configurations. Use four new hard disk drives or use an existing drive and three new drives for this setup.

**RAID 5** stripes both data and parity information across three or more hard disk drives. Among the advantages of RAID 5 configuration include better HDD performance, fault tolerance, and higher storage capacity. The RAID 5 configuration is best suited for transaction processing, relational database applications, enterprise resource planning, and other business systems. Use a minimum of three identical hard disk drives for this setup.

**JBOD** *(Spanning)* stands for Just a Bunch of Disks and refers to hard disk drives that are not yet configured as a RAID set. This configuration stores the same data redundantly on multiple disks that appear as a single disk on the operating system. Spanning does not deliver any advantage over using separate disks independently and does not provide fault tolerance or other RAID performance benefits.

**SPAN** helps to combine the capacity of multiple physical disk drives into one single large drive volume, making the small-sized disk drives more useful. The disk drives in this mode need not to be identical in size or speed.

If you want to boot the system from a hard disk drive included in a created RAID set, copy first the RAID driver from the support CD to a floppy disk before you install an operating system to the selected hard disk drive.
5.1.2 Installing hard disk drives

The motherboard supports Serial ATA for RAID set configuration. For optimal performance, install identical drives of the same model and capacity when creating a disk array.

To install the SATA hard disks for RAID configuration:

1. Install the SATA hard disks into the drive bays following the instructions in the system user guide.
2. Connect a SATA signal cable to the signal connector at the back of each drive and to the SATA connector on the motherboard.
3. Connect a SATA power cable to the power connector on each drive.

5.1.3 Setting the RAID item in BIOS

You must set the RAID item in the BIOS Setup before you can create a RAID set from SATA hard disk drives attached to the SATA connectors supported by AMD SP5100 chipset. To do this:

1. Enter the BIOS Setup during POST.
2. Go to the Main Menu > Storage Configuration, then press <Enter>.
3. Set SATA Port1-4 to [RAID] and SATA Port5-6 will be set to [RAID] too.
4. Press <F10> to save your changes and exit the BIOS Setup.

Refer to Chapter 4 for details on entering and navigating through the BIOS Setup.
5.2 FastBuild Utility

The FastBuild Utility allows you to create RAID 0, RAID 1, RAID 10, and RAID 5, SPAN and JBOD set(s) from Serial ATA hard disk drives that are connected to the Serial ATA connectors supported by the Promise RAID.

To enter the FastBuild Utility:

1. Install all the Serial ATA hard disk drives at Red SATA Connector.
2. Turn on the system.
3. During POST, press <Ctrl> + <F> to enter the utility main menu.

The RAID BIOS setup screens shown in this section are for reference only and may not exactly match the items on your screen.
5.2.1 Creating a RAID set  
(RAID 0, RAID 1, RAID 10, RAID 5, SPAN or JBOD)

To create a RAID set:

1. From the main control panel, press <2> to enter the **LD View Menu**.

   ![LD View Menu](image)

   ![LD View Menu](image)
2. Press `<Ctrl> + <C>` to define an LD and use `<Spacebar>` to select a desired RAID mode.

```
FastBuild (tm) Utility (c) 2004-2010 Promise Technology, Inc.
[ LD Define Menu ]
LD No  LD Name         RAID Mode  Drv
LD 1  Logical Drive 1  RAID 1          0
Stripe Block  128 KB   Initialization Fast
Gigabyte Boundary ON
Read Policy     NA       Write Policy WriteThru
```

```
[ Drives Assignments ]
Port:ID  Drive Model  Capabilities   Capacity(GB)   Assignment
01:01   HD7XXXXXXXXXXXXX  SATA 3G     250.05           N
02:01   HD7XXXXXXXXXXXXX  SATA 3G     250.05           N
03:01   HD7XXXXXXXXXXXXX  SATA 3G     250.05           N
04:01   HD7XXXXXXXXXXXXX  SATA 3G     250.05           N
```

3. Use `<Spacebar>` to set **Read Policy** to **Read Cache** and **Write Policy** to **WriteBack**.

```
FastBuild (tm) Utility (c) 2004-2010 Promise Technology, Inc.
[ LD Define Menu ]
LD No  LD Name         RAID Mode  Drv

```

Any Key To Continue......
5.2.2 Deleting a RAID set

To delete a RAID set:

1. From the main control panel, press <3> to enter the **Delete LD Menu**.

2. Select the RAID set you would like to delete and press <Del>/<Alt>+<D> to delete the selected RAID set.
3. Press <Ctrl>+<Y> to confirm and delete the selected RAID set.

Press Ctrl-Y to delete the data in the disk!
or press any other key to abort...

4. The selected RAID set has been deleted.
5.2.3 Viewing the Drive Assignment

To view the drive assignment:

1. From the main control panel, press <1> to enter the **Drive Assignment Menu**.

2. The drive assignment is displayed as shown.
5.2.4 Viewing the Controller Configuration

To view the controller configuration:

1. From the main control panel, press <4> to enter the Controller Configuration Menu.

![Controller Configuration Menu](image)

2. The system resources configuration is displayed as shown.

![System Resources Configuration](image)
This chapter provides instructions for installing the necessary drivers for different system components.
Chapter summary

6.1 RAID driver installation ............................................................ 6-3
6.2 AMD® processor driver installation .................................. 6-15
6.3 LAN driver installation ......................................................... 6-16
6.4 ATI SM Bus controller driver installation ...................... 6-20
6.5 Display driver installation .................................................... 6-21
6.6 Management application and utilities installation ............ 6-24
6.1 RAID driver installation

After creating the RAID sets for your server system, you are now ready to install an operating system to the independent hard disk drive or bootable array. This part provides instructions on how to install the RAID controller drivers during OS installation.

The RAID card driver might be included in the Linux OS installation CD, and could be loaded automatically during the OS installation. However, we recommend you use the RAID driver packaged in the RAID card support CD for a better reliability.

### 6.1.1 Creating a RAID driver disk

- You may have to use another system to create the RAID driver disk from the system/motherboard support CD or from the Internet.
- When you use a SATA optical drive and PROMISE® RAID, you cannot boot into FreeDOS using the support CD. Either reset SATA Port1 - Port4 in BIOS to [IDE] and boot again or create the RAID driver disk in another computer.

A floppy disk with the RAID driver is required when installing Windows® or Linux operating system on a hard disk drive that is included in a RAID set. You can create a RAID driver disk in DOS (using the Makedisk application in the support CD).

To create a RAID driver disk in DOS environment:

1. Place the motherboard support CD in the optical drive.
2. Restart the computer, then enter the BIOS Setup.
3. Select the optical drive as the first boot priority to boot from the support CD. Save your changes, then exit the BIOS Setup.
4. Restart the computer.
5. The Makedisk menu appears. Select Promise SW ROMB Controller Driver, and press <Enter> to enter the submenu.

Create Driver Diskette Menu
- Promise SW ROMB Controller Driver
- AMD AHCI Controller Driver
- Write DMI
- FreeDOS command prompt
6. Use the arrow keys to select the type of RAID driver disk you want to create.

7. Place a blank, high-density floppy disk to the floppy disk drive.
8. Press <Enter>.
9. Follow screen instructions to create the driver disk.
6.1.2 Installing the RAID controller driver

Windows® Server OS

During Windows® Server OS installation

To install the RAID controller driver when installing Windows® Server OS:

2. Press <F6> when the message “Press F6 if you need to install a third party SCSI or RAID driver...” appears at the bottom of the screen.

3. When prompted, press <S> to specify an additional device.
4. Insert the RAID driver disk you created earlier to the floppy disk drive, then press <Enter>

5. Select the RAID controller driver you need from the list, then press <Enter>

6. The Windows® Setup loads the RAID controller drivers from the RAID driver disk. When prompted, press <Enter> to continue installation.

7. Setup then proceeds with the OS installation. Follow screen instructions to continue.

To an existing Windows® Server OS

To install the RAID controller driver on an existing Windows® Server OS

1. Restart the computer, and then log in with Administrator privileges.
2. Windows® automatically detects the RAID controller and displays a New Hardware Found window. Click Cancel.
3. Right-click the My Computer icon on the Windows® desktop, and then select Properties from the menu.
4. Click the Hardware tab, and then click the Device Manager button to display the list of devices installed in the system.
5. Right-click the RAID controller item, then select Properties.
6. Click the Driver tab, and then click the Update Driver button.
7. The Upgrade Device Driver Wizard window appears. Click Next.
8. Insert the RAID driver disk you created earlier to the floppy disk drive.
9. Select the option Install the software automatically (Recommended), and then click Next.
10. The wizard searches the RAID controller drivers. When found, click Next to install the drivers.
11. Click Finish after the driver installation is done.
To verify the RAID controller driver installation:

1. Right-click the **My Computer** icon on the Windows® desktop, and then select **Properties** from the menu.
2. Click the **Hardware** tab, and then click the **Device Manager** button.
3. Click the “+” sign before the item **SCSI and RAID controllers**, and then the **Promise AHCI Compatible RAID Controller** item should appear.

   ![Computer Management window](image)

   The screen differs based on the controller.

4. Right-click the **RAID controller** driver item, and then select **Properties** from the menu.
5. Click the **Driver** tab, and then click the **Driver Details** button to display the RAID controller drivers.
6. Click **OK** when finished.
Red Hat® Enterprise Linux OS 4.8

To install the RAID controller driver when installing Red Hat® Enterprise OS:

1. Boot the system from the Red Hat® OS installation CD.
2. At the boot:, type `linux dd`.
3. Press <Enter>.

- To install or upgrade in graphical mode, press the <ENTER> key.
- To install or upgrade in text mode, type: `linux text <ENTER>`.
- Use the function keys listed below for more information.

```
[F1-Main]  [F2-Options]  [F3-General]  [F4-Kernel]  [F5-Rescue]
boot: linux dd
```

4. Select **Yes** using the <Tab> key when asked if you have the driver disk, then press <Enter>.

5. Press <Enter> to continue.

6. Select **No** and press <Enter> to continue.
7. Select **Skip** and press <Enter> to continue.

8. Follow the onscreen instructions to finish installing the RedHat operating system.
Red Hat® Enterprise Linux OS 5.0

To install the RAID controller driver when installing Red Hat® Enterprise OS:

1. Boot the system from the Red Hat® OS installation CD.
2. At the boot:, type linux dd
3. Press <Enter>.

- To install or upgrade in graphical mode, press the <ENTER> key.
- To install or upgrade in text mode, type: linux text <ENTER>.
- Use the function keys listed below for more information.
  
  [F1-Main] [F2-Options] [F3-General] [F4-Kernel] [F5-Rescue]

   boot: linux dd

4. Select Yes using the <Tab> key when asked if you have the driver disk, then press <Enter>.

5. Insert the Red Hat® Enterprise RAID driver disk to the floppy disk drive, select OK, then press <Enter>.

The drivers for the RAID card are installed to the system.
6. When asked if you will load additional RAID controller drivers, select No, then press <Enter>.

7. Follow the onscreen instructions to finish the OS installation.
SUSE Linux 11 OS

To install the RAID controller driver when installing SUSE Linux Enterprise Server OS:

1. Boot the system from the SUSE OS installation CD.
2. Use the arrow keys to select **Installation** from the **Boot Options** menu.

3. Press <F6>, then select **Yes** from the menu. Press <Enter>.
4. Insert the RAID driver disk to the floppy disk drive. Type the command `acpi=off apic=bigsmp brokenmodules=ahci` in Boot Options field, and press <Enter>.

![Boot Options](image.png)

5. When below screen appears, select the USB floppy disk drive (sda) as the driver update medium. Select OK, then press <Enter>.

![Driver Update Medium](image.png)
6. The drivers for the RAID controller are installed to the system as shown below.

7. Select **Back** and follow the onscreen instructions to finish the installation.
6.2 **AMD® processor driver installation**

This section provides instructions on how to install the AMD® processor driver on the system.

You need to manually install the AMD® processor driver on a Windows XP / Server 2003 operating system.

To install the AMD® processor driver:

1. Restart the computer, then log on with **Administrator** privileges.

2. Insert the motherboard/system support DVD to the optical drive. The support DVD automatically displays the **Drivers** menu if Autorun is enabled in your computer.

   If Autorun is NOT enabled in your computer, browse the contents of the support DVD to locate the file **AUTORUN.EXE** and double-click the **AUTORUN.EXE** to run the support DVD.

3. Click the item **AMD Processor Driver** from the menu, and then follow the onscreen instructions to complete the installation.
6.3 LAN driver installation

This section provides the instructions on how to install Intel® Gigabit LAN controller driver.

To install the Intel® Gigabit LAN controller driver on a Windows® OS:

1. Restart the computer, and then log on with Administrator privileges.
2. Insert the motherboard/system support DVD to the optical drive. The support DVD automatically displays the Drivers menu if Autorun is enabled in your computer.

If Autorun is NOT enabled in your computer, browse the contents of the support DVD to locate the file AUTORUN.EXE and double-click the AUTORUN.EXE and follow step 4 to run the installation.

3. Click Intel® PRO/1000 Gigabit Adapters Driver.
4. When the Intel® Network Connections – InstallShield Wizard window appears, click Next to start the installation.

5. Click I accept the terms in the license agreement and then click Next to continue.
6. Select the programs you want to install and click **Next** to continue.

![Image of Intel(R) Network Connections window]

7. Click **Install** to start the installation.

![Image of Ready to Install the Program window]
8. The programs you select are being installed.

9. Click **Finish** to finish the installation.
6.4 ATI SM Bus controller driver installation

This section provides instructions on how to install the ATI SM Bus driver on the system.

You need to manually install the ATI SMBus driver on a Windows® XP / Server 2003 operating system. To install the driver:

1. Restart the computer, then log on with Administrator privileges.
2. Insert the motherboard/system support DVD to the optical drive. The support DVD automatically displays the Drivers menu if Autorun is enabled in your computer.

If Autorun is NOT enabled in your computer, browse the contents of the support DVD to locate the file AUTORUN.EXE and double-click the AUTORUN.EXE to run the support DVD.

3. Click the item ATI SM Bus Controller Driver from the menu, and then follow the onscreen instructions to complete the installation.
6.5 Display driver installation

This section provides instructions on how to install the ASPEED display driver.

To install the ASPEED display driver on a Windows® OS:

1. Restart the computer, then log on with Administrator privileges.
2. Insert the motherboard/system support DVD to the optical drive. The support DVD automatically displays the Drivers menu if Autorun is enabled in your computer.

   If Autorun is NOT enabled in your computer, browse the contents of the support DVD to locate the file AUTORUN.EXE and double-click the AUTORUN.EXE to run the support DVD.

3. Click ASPEED AST2050 Display Driver.
4. When the **ASPEED InstallShield Wizard** window appears, click **Next** to continue.

5. Click **Install** to start the installation.
6. The system installs the driver automatically.

7. When the installation completes, click Finish to exit the wizard.
6.6 Management applications and utilities installation

The support DVD that came with the motherboard package contains the drivers, management applications, and utilities that you can install to avail all motherboard features.

The contents of the support DVD are subject to change at any time without notice. Visit the ASUS website (www.asus.com) for updates.

6.6.1 Running the support DVD

Place the support DVD to the optical drive. The DVD automatically displays the Drivers menu if Autorun is enabled in your computer.

If Autorun is NOT enabled in your computer, browse the contents of the support DVD to locate the file ASSETUP.EXE from the BIN folder. Double-click the ASSETUP.EXE to run the DVD.

6.6.2 Drivers menu

The Drivers menu shows the available device drivers if the system detects installed devices. Install the necessary drivers to activate the devices.

The screen display and driver options vary under different operating system versions.
6.6.3 Utilities menu

The Utilities menu displays the software applications and utilities that the motherboard supports. Click an item to install.

6.6.4 Make disk menu

The Make disk menu contains items to create the RAID driver disk.

6.6.5 Contact information

Click the Contact tab to display the ASUS contact information. You can also find this information on the inside front cover of this user guide.
